TX Series

1. IMPRESSIVE PRODUCTIVITY

To keep your business running smoothly, you need to be able to work quickly and without interruption.

On top of rapid printing speeds from 2.8 to 3.2ppm* the **imagePROGRAF TX Series** offers **dual roll feeding, automatic roll loading** and **high-capacity ink tanks** so you can keep printing without frequently stopping to change consumables.

*TX-2100 is 2.8ppm A1 portrait. TX-3100/4100 A1 in landscape 3.2ppm.

2. MULTI-FUNCTION ROLL SYSTEM

The imagePROGRAF TX Series includes a **multi-function roll system** to suit your varying print needs. The secondary roll can be used for roll feeding or as a media take-up unit, enabling either **high-volume printing** of mixed media types through two rolls, or **continuous large-format printing**, with the second roll automatically rewinding the printout – giving users freedom from continuously supervising the device.

This means, for instance, that you can **feed mixed types and sizes of media** from both rolls during the day, and then switch the lower unit to take-up and run unattended large format printing during the night.

3. OPTIMISED INK USE

The ink tanks of the imagePROGRAF TX Series are provided in three sizes (700 ml, 330 ml and 160 ml), which can be **mixed and matched** to suit your printing environment and the amount of each colour you use.

Thanks to this flexibility you can reduce how often you need to replace ink tanks, which helps you **use ink more effectively and avoid interruptions**.

4. BORDERLESS PRINTING

The imagePROGRAF TX Series can perform borderless printing easily on standard-width rolls, so you don't need to manually cut prints to size - saving you time and materials.

For bespoke widths, the series offers a three-sided borderless print function, so all you need to do is cut the final edge to any size you need.

5. EASY MEDIA HANDLING

Alongside automatic roll loading, the **imagePROGRAF TX Series** can **automatically detect what media is loaded**, and how much of it is left on the roll.

Save time configuring your device for different media types, and get **early warnings when rolls are running low** to avoid stopping mid-print.

6. INK REPLACEMENT DURING PRINTING

When ink tanks do run out the imagePROGRAF TX Series automatically switches to reserve sub-ink tanks, to enable **hot-swap ink tank replacement** during printing. This makes it easy to use all ink in the tanks before changing them, preventing downtime and helping to cut costs.

These sub-ink tanks are easy to maintain - the operation panel displays the amount of ink remaining in the sub-ink tanks in three levels: full, half and empty.

7. ENHANCED SECURITY FEATURES

Security is important in every environment, especially Print-for-Pay businesses who handle customer data and in offices where large format printers are shared by many different users.

To protect your sensitive data, the imagePROGRAF TX Series offers **strengthened security features** including secure data storage and erasure, encrypted data transmission, interface security and secure printing.

8. SOFTWARE SUPPORT FOR GREAT RESULTS

Alongside ample management software to help users work more efficiently, the imagePROGRAF TX Series includes **software to support CAD and in-house poster production as standard**.

This includes PosterArtist, offering templates and clip art to help even inexperienced users produce high-quality posters in-house.
